

Regional Construction Safety Management Support

E&PS Project Delivery Center of Excellence (CoE) is looking for regional Construction Safety Support to help provide governance and technical support for the adoption and execution of the One Construction Safety Strategy and to drive initiatives and program improvements to deliver construction safety excellence. The Regional Construction Safety Manager will partner with Regional Project Delivery and Engineering teams in developing and executing construction and design safety plans for their region. Individual must possess a strong aptitude for working with construction project planning and execution to integrate safety into the delivery of the project successfully. This role requires a high degree of collaboration between internal and external partners and stakeholders.

The Regional Construction Safety Manager will:

- Provide support for the deployment of OneCSS by:
 - Develop deployment strategy in partnership with regional business leaders to successfully deploy OneCSS across region.
 - Assist business leaders in their deployment of OneCSS.
 - Develop and maintain deployment adoption metrics to track rollout and performance by region, country, campus, and project.
 - Assist Global team to deploy in region initiatives.
- Provide technical assistance to project leaders as a construction safety SME.
- Provide regional governance support to Regional Directors in support of management reviews, monitoring of assurance activities, developing and presenting performance metrics, developing and delivering construction safety presentations.
- Support incident investigations.
- Engage with Safety DRIs and EHS support on construction projects to provide leadership and ensure quality of support.
- Participate in project and regional performance reviews.
- Participate in EHS in Design sessions within region.
- Proactively engage with Regional Directors to forecast programmatic and project level safety risks and work with teams to address emerging risks.
- Facilitate in region forums with internal and external partners to enhance safety communications, lessons learned and best practice sharing, and safe delivery.
- Assist in performing deep dive safety reviews and listening tours for targeted safety risk topics as requested by CoE.
- Assist in the preparation of presentations, including high visibility/time sensitive ones, for leadership.
- Present data and targeted awareness presentations.
- Develop and issue targeted safety campaign materials for project teams to use.
- Develop and issue safety related lessons learned, best practices, and innovative solutions as requested by CoE.

Qualifications:

- Proven experience with construction safety management, integrated risk management, and contractor safety management.
- BS degree in Safety, Engineering, Computer Science, or related degrees is preferred.
